

Test Case ID	Module	Feature / Description	Expected Outcome
CV-001	CV Parser	Basic Extraction	Correctly identifies Name, Email, and Phone from a standard resume layout.
CV-002	CV Parser	Skill Normalization	"Python Developer" and "Proficient in Python" both map to the Python skill.
CV-003	CV Parser	Complex Formatting	Handles multi-column resumes and tables without merging text incorrectly.
CV-004	CV Parser	Section Splitting	Correctly identifies and separates Work Experience from Projects sections.
MATCH-001	Matching Engine	Tech Synonym Match	A candidate with <i>Django</i> matches a job requiring <i>Web Frameworks</i> .
MATCH-003	Matching Engine	Similarity Threshold	Jobs with < 20 semantic similarity are not recommended to the user.
MATCH-004	Matching Engine	Direct Overlap	Exact skill matches (e.g., React) receive a 50% skill bonus correctly.

TEST-001	RAG Engine	LLM Generation	RAG produces valid JSON MCQs with 4 options and a single correct answer key.
TEST-002	RAG Engine	Fallback Logic	If Ollama is offline, system retrieves questions from the JSON question bank.
TEST-003	RAG Engine	Secure Scoring	Backend recalculates score based on file, ignoring any frontend-sent scores.
TEST-004	RAG Engine	Status Transition	Score $\geq 40\%$ -> Interview; Score $< 40\%$ -> Rejected
UI-001	Integration / UI	Onboarding Flow	CV upload -> redirect to profile -> profile auto-filled with parsed data.
UI-002	Integration / UI	Test Timer	Frontend stays synced with backend; test auto-submits on timeout.
UI-003	Integration / UI	HR Dashboard	HR can view applicants ranked by their relevance score.
