

TEST CASE 1

Feature: Resume Parsing

Scenario: Automatic extraction of key details from resume.

Given a candidate has uploaded a valid resume in PDF format

When The system processes the resume

Then the system should extract the candidate's education, skills, and expertise area and store them in the candidate profile and display extracted information for confirmation.

TEST CASE 2

Feature: AI Test Generation

Scenario: Generating test based on candidate expertise.

Given the system has extracted the candidate's main area of expertise

When the test generation module is triggered

Then the system should create a customized test based on the candidate's field and assign relevant questions to match the candidate's skills.

TEST CASE 3

Feature: Test Monitoring

Scenario: Detect cheating attempt during test.

Given the candidate has started the online test

When the system detects suspicious activity (e.g., tab switch or external camera movement)

Then the system should log the incident and issue a warning to the candidate and mark the event in the test report.

TEST CASE 4

Feature: Video Interview

Scenario: AI evaluates the candidate's soft skills during the interview.

Given the candidate starts the AI-based interview

When the interview is in progress

Then the system should capture and analyze facial expressions, tone, and body language and score the candidate on communication, confidence, and professionalism and store the interview recording securely.

TEST CASE 5

Feature: Candidate Matching and Ranking

Scenario: Display ranked candidates for HR staff.

Given all candidates have completed tests and interviews

When the HR dashboard is accessed

Then the system should display candidates ranked by overall performance and show test scores, interview evaluations, and video recordings and allow HR to shortlist or review candidates.
